

In the Specification:

Replace the second paragraph on Page 7, beginning at line 3 to read as follows:

-- Figure 6 is a graph showing percent metallization of briquettes prepared with cellulose binder and various sizes of iron fines. --

On Page 7 please add the following paragraph after the second paragraph:

-- Figure 7 is a graph showing crush strength of briquettes prepared with cellulose binder and various sizes of iron fines. --

REMARKS

The substitute drawings being submitted for examination have an additional figure, Fig. 7, included in them. Fig. 6, as originally submitted, included both metallization and crush strength of briquettes prepared with cellulose binder and various sizes of iron fines. In the substitute drawings, Fig. 6 has been revised to show just the percent metallization of briquettes with cellulose binder and various sizes of iron fines, and Fig. 7 shows the crush strength of briquettes prepared with cellulose binder and various sizes of iron fines. The separation of this information into two separate graphs is intended to make understanding the application easier. There is no new matter introduced in these substitute drawings. The substitute sheets being submitted show Figs. 2 and 3 together on the second sheet, Figs. 4 and 5 together on the third sheet, and Fig. 6 and New Fig. 7 together on the fourth sheet. Figure 1 remains the same.
